NGINX

Reverse Proxy

```
nginx -s stop    #fast shutdown
nginx -s quit    #graceful shutdown
nginx -s reload  #changing configuration, starting new
worker processes with a new configuration, graceful
shutdown of old worker processes
nginx -s reopen #re-opening log files
```

 Copy

```
127.0.0.1:81 127.0.0.1:82
```

```
# or localhost:81 localhost:82
```

```
# or if you're on a network static-ip:81 static-ip:82
```

1) Start Nginx: Open Command Prompt as Administrator and navigate to the directory where Nginx is installed. Then, start Nginx by running the `start` command:

```
cd C:\path\to\nginx
```

```
start nginx
```

2) **Check Nginx Configuration:** Before reloading the configuration, it's a good practice to check if the configuration is correct. You can do this using the command below:

```
nginx -t
```

3) Reload Nginx Configuration: If the configuration is correct, you can reload the Nginx service to apply the changes. This can be done using the command below:

```
nginx -s reload
```

4) To stop the Nginx server on Windows, you can use the `-s stop` command. Open Command Prompt as Administrator, navigate to the directory where Nginx is installed, and run the following command:

```
cd C:\path\to\nginx
```

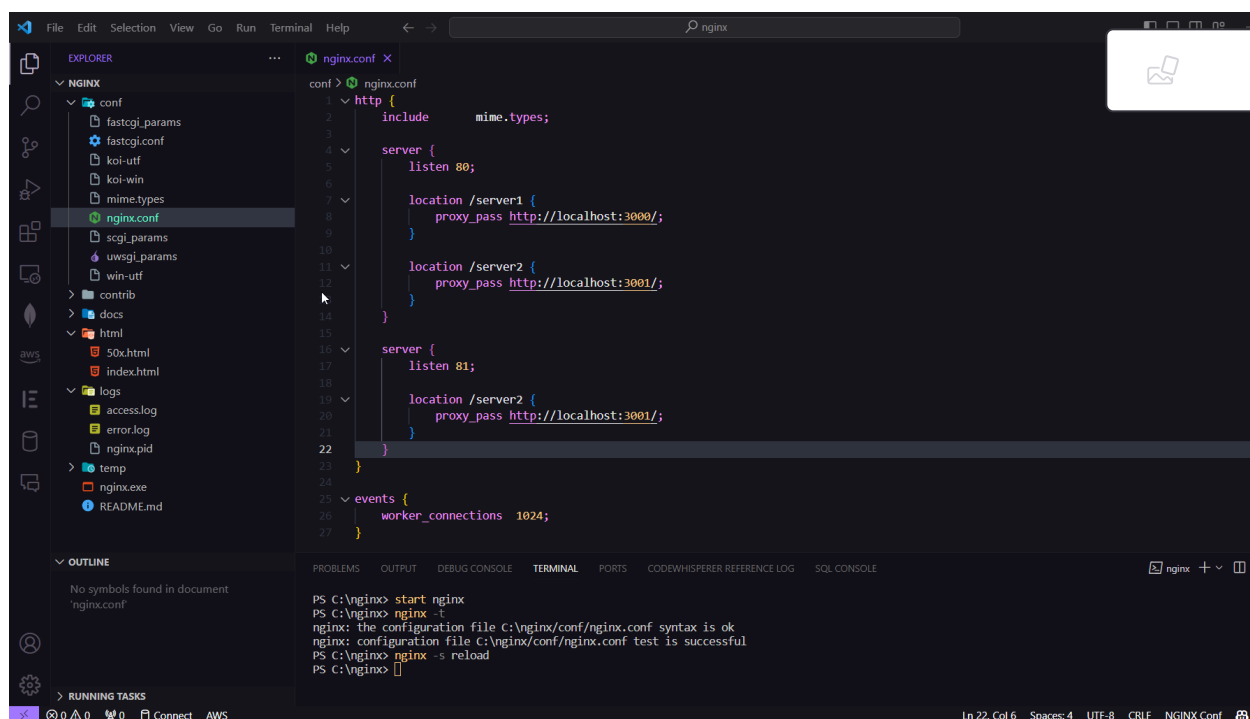

```
nginx -s stop
```

Run two servers on two ports

Server1 listening at <http://localhost:3000>

Server2 listening at <http://localhost:3001>

configuration code

The screenshot shows the Visual Studio Code editor with the `nginx.conf` file open. The file content is as follows:

```
conf > nginx.conf
1 http {
2     include mime.types;
3
4     server {
5         listen 80;
6
7         location /server1 {
8             proxy_pass http://localhost:3000;
9         }
10
11        location /server2 {
12            proxy_pass http://localhost:3001;
13        }
14    }
15
16    server {
17        listen 81;
18
19        location /server2 {
20            proxy_pass http://localhost:3001;
21        }
22    }
23 }
24
25 events {
26     worker_connections 1024;
27 }
```

The terminal window at the bottom shows the following commands and output:

```
PS C:\nginx> start nginx
PS C:\nginx> nginx -t
nginx: the configuration file C:\nginx\conf\nginx.conf syntax is ok
nginx: configuration file C:\nginx\conf\nginx.conf test is successful
PS C:\nginx> nginx -s reload
PS C:\nginx>
```
